

Collaborative Processes and Spatial Data Portals

Enhancing Impact Assessments & Stakeholder Relations

The Problems

- Information Quantity & Quality**
 - Massive amount of documentation and information collected and produced
 - Quality Control Measure to ensure accurate and up to date information
- Information Security**
 - Personal information needs to be secure
- Information Flow**
 - Much of the information is not available throughout the life-cycle of the project

The Project

Information Management consultancy based out of Calgary, Canada
Facilitate planning and decision making to the energy sector

GLENCORE

Multinational commodity trading and mining company, headquartered in Switzerland

Mangara and Badila oil fields in the Doba basin of Chad which commenced production in 2013

The Solution

- Rapid Assessment
- Effective Understanding
- Collaborative Management Approach
- Comprehensive Data Model
- Communicate Project Impacts

The Benefits

- Create strong relationships between project and the Stakeholders.
- Facilitate Information Flow**
 - Centralized information repositories
- Provides a baseline** for information management throughout the life cycle of the project
- Plans and Manages SR activities**
 - Visualization through web based interface
- Enhances Compliance & Governance**
 - Meet international standards
- Enables Transparent and Open Engagement**

Stakeholder Relations

Glencore Stakeholder Relations (SR) has an extensive 9 step compensation process

Creates massive amounts of information that must be entered, validated and available to make educated project decisions
