## Outline

- Overview of RUDP and its main investments: Roads and Drains
- RUDP-related negative impacts and relationship with ESIA
- ESIA as a legal requirement and its processes in Rwanda
- Gaps/challenges of ESIA post Approval and way forward
- Conclusion
- Questions and Answer session

# Rwanda Urban Development Project (RUDP): Overview

- **Informal settlement upgrading and accelerating the urbanization process in the City of Kigali and Six Secondary Cities of Rwanda**
  - more than 79 unplanned settlement sites are located in the city of Kigali and six secondary cities of Rwanda
  - approximately 66% and 90% of the respective city residents live in informal settlements without required basic infrastructures
  - At least 20% of the informal settlements are removed and urbanization growth rate of 35% is achieved by the year 2024 against 18% as of today
- **RUDP**
  - RUDP is a 10 years project implemented by the GoR under financial support of the World Bank since 2015
  - PDO-Improve access to basic services, enhance resilience and strengthen integrated urban planning and management in the City of Kigali and the six secondary cities of Rwanda
- **Investments** include roads construction and rehabilitation, street lightning, pedestrian walkways and drainage construction

- **Indicators to be used to measure progress against the PDO**

- Number of informal settlements upgraded
- People provided with improved urban living conditions
- People in urban areas with access to all-season roads within a 500 m
- People provided with access to markets, jobs and other social services
- Cities with approved detailed area plans, incorporating the principles of sustainability

## **RUDP-related negative impacts and ESIA**

- Roads and Drains construction under RUDP aims at improving the living conditions of urban dwellers and informal settlements upgrading
- However, besides positive impacts, any major development project also brings concerns about environmental harm and negative social impacts
- **Potential impacts include:**
  - Disruption of normal life in populated areas: damages and relocation of public services/utilities (roads, water services, electricity, bus stations, access to schools, homes, etc. in a period of time unknown)
  - Community resettlement, spread of communicable disease and economic inequality
  - Waste generated at construction sites which can pollute land and water bodies
  - cutting of trees and damage to vegetation
  - Road accidents, noise and air pollution among others.
- **Hence, all those negative impacts and many others need to be mitigated**
- **An ESIA study was deemed necessary prior to the civil works commencement**

# ESIA legal process and How it helps addressing the problems

## ESIA as a requirement

- In many countries, in-depth ESIA with appropriate mitigation measures and ESMP is a required environmental process before the implementation of infrastructure projects such as roads and drains
- The 2018 Environmental law and 2019 ministerial order
- ESIA approval and clearance by the RDB as per the current national environmental legislation
- ESIA approval conditions

## ESIA Process in Rwanda

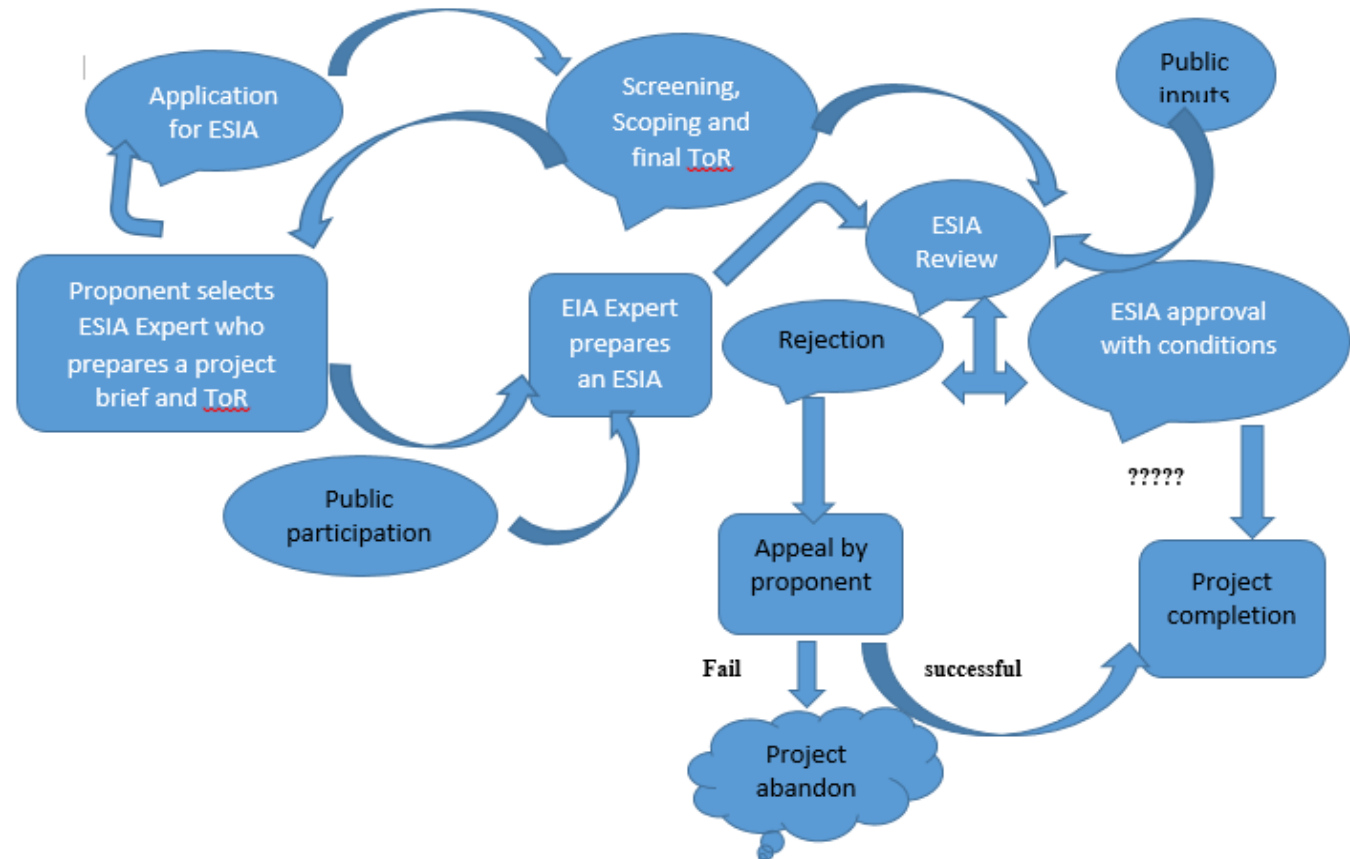

Fig.1: ESIA processes in Rwanda as per the 2018 environmental law and 2019 ministerial order

# Proposed enabling factors for environmental compliance/performance

Gaps/Challenge	Proposed solution
ESIA-Generic impacts and mitigation measures	Impacts scrutiny and mitigation measures to be site-specific
Procurement and tendering process	<ul style="list-style-type: none"> <li>- Clarity on ESTCs, ESMP, code of conduct and staffing</li> <li>-submit a past environmental compliance certificate (ECC)</li> </ul>
Contract management and compliance enforcement	<ul style="list-style-type: none"> <li>-Close follow-up on contractual obligations and their fulfilment</li> <li>-Conduct regular assessments and report on compliance/non-compliance for timely decision-making</li> <li>- Payment to be effected based on proof of environmental and social performance and costs spent</li> <li>-Issue the ECC upon project completion as incentive</li> <li>-Impose fining and Contract termination in case of non-compliance as per established laws</li> </ul>
Monitoring, supervision, evaluation and reporting	<ul style="list-style-type: none"> <li>-Development of compliance measurement framework including specific metrics, checklist and template of environmental and social issues/parameters</li> <li>- Use of technological tools: Geo-Enabling initiative for Monitoring and Supervision (GEMS), web based Environmental Screening Tool and drones</li> </ul>
Staffing	-Hiring required project staffs including ESSs to be permanently based on the project sites
Environmental audit	-Independent environmental auditor to undertake a review of the project compliance and environmental audit reports
Projects requirements and national environmental procedures	-Organize regular workshop meetings/training with contractors, project beneficiaries, and local communities
Project stakeholders involvement and consultations	<ul style="list-style-type: none"> <li>-Empowering the communities verifiers and affected people</li> <li>-Include the stakeholders in impacts management during the project implementation and post-implementation</li> <li>- Regular consultations open through existing communication channels: meetings, radio and TV shows</li> </ul>
Archiving and filing	-Develop a digital archiving system for filing the project documentation

## Conclusion

- Gaps hindering the management of the project-related impacts and compliance and enforcement between ESIA approval and project completion have been documented with reference to RUDP and some literature
- Placing value on compliance benefits and devote required costs to deliver a reputational value of the organization and advance positive environmental and social outcomes
- Experience and lessons learned from RUDP can be used as valuable insights for future implementation of similar projects
- Further studies are still required to explore in –depth the extent of ESMPs implementation to measure the project environmental and social performance during the project life cycle

Thank you
