

Triggers

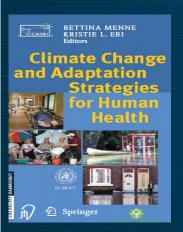

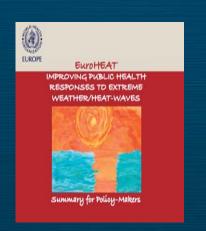

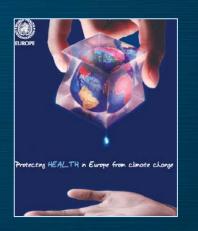

PHASE 1: National health impact and vulnerability assessments

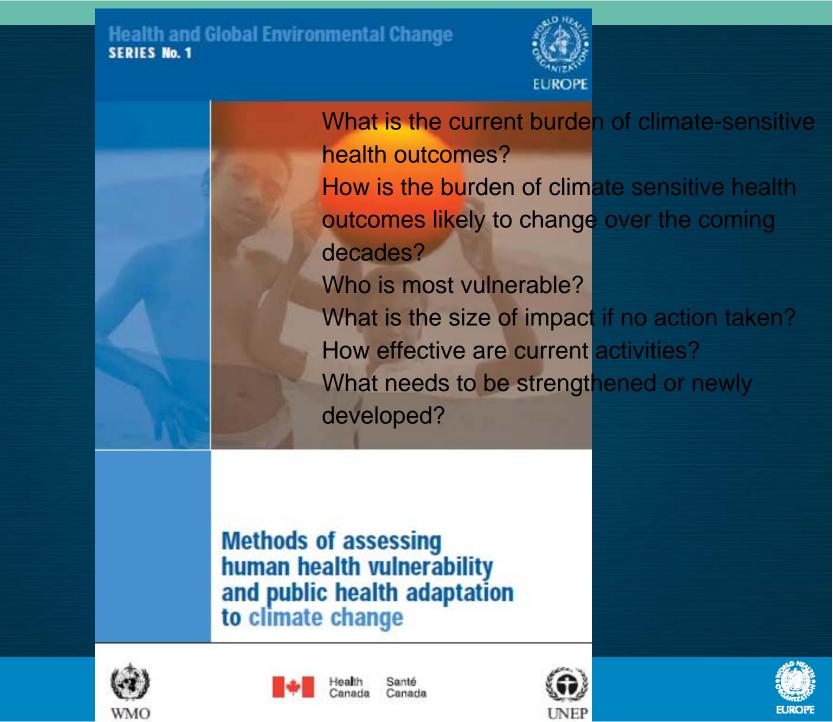

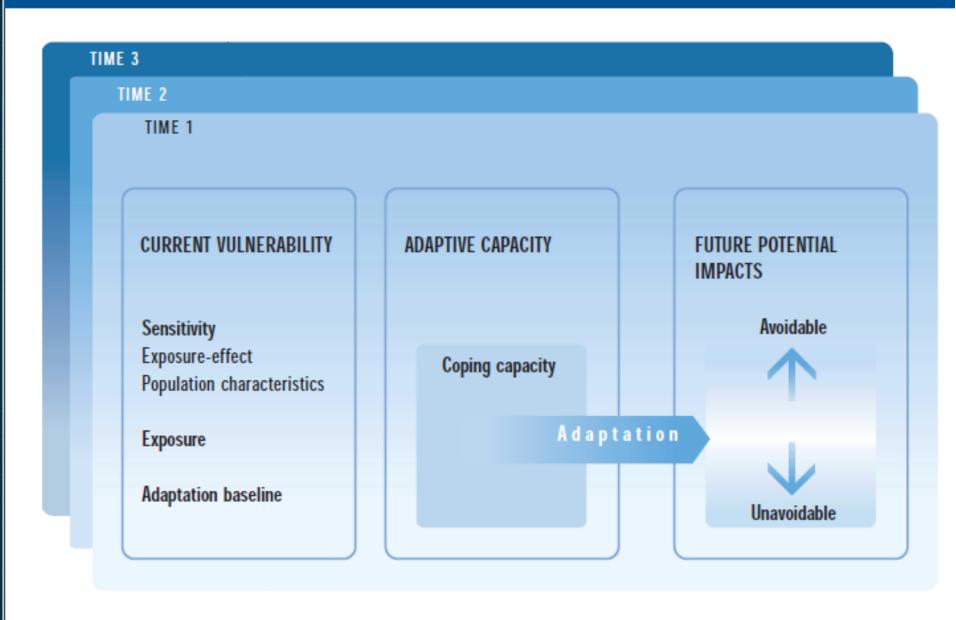

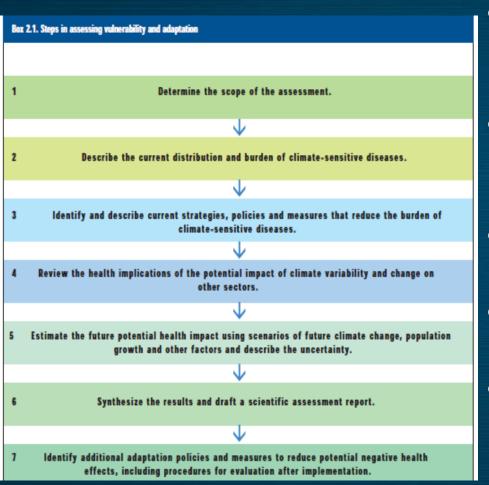

Fig. 2.1. Schematic of relationships between vulnerability, adaptive capacity and potential health impact

Steps in assessing vulnerability and adaptation

- Building on lessons learnt in assessments carried out;
- Equal wait to process and content, e.g. stakeholders;
- Building on a step wise approach;
- Building on/in risk management;
- P Revise over time
 (WHO meeting in Victoria (2001)
 and Geneva (2002))

The process

- Stakeholders
- Management of the assessment
- Levels of the assessment
- Peer review
- Communication and dissemination

Stakeholder involvement

INTEREST - how much interest you think the stakeholder legitimately has in your policy objectives, irrespective of whether or not they are aware of the policy/proposals or have any views on it

INFLUENCE - how much influence the stakeholder can exert on the Department's ability to deliver the policy or proposal and implementation of the objectives.

- INFORM
- CONSULT
- INVOLVE
- PARTNER

Part II

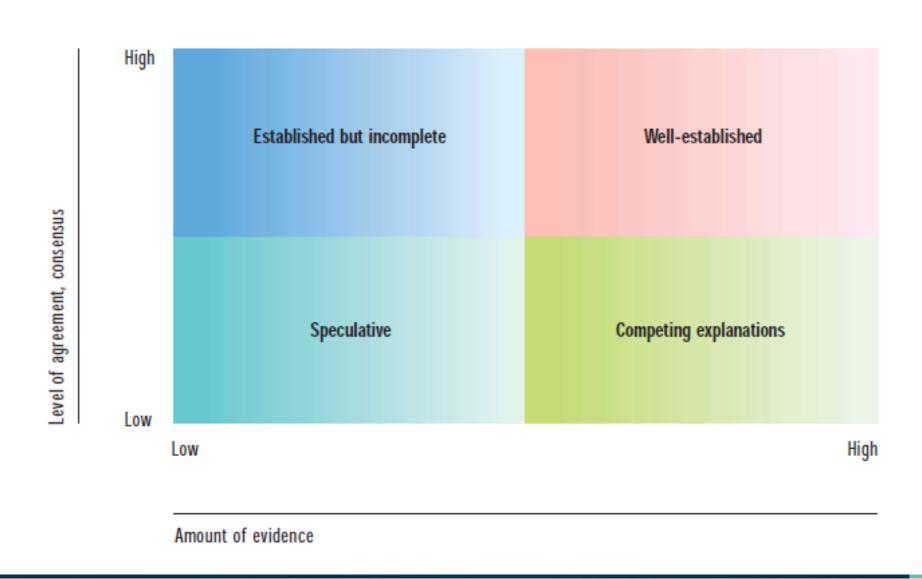

Generality

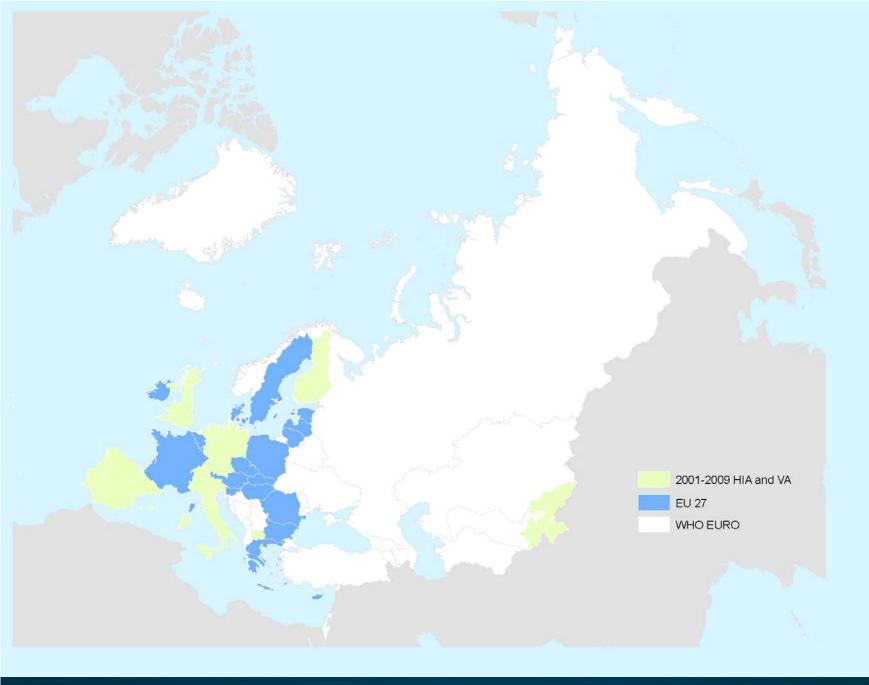

- Attributing health effects
- Literature review
- Scenarios
- Describing and quantifying uncertainty

For each health outcome what is the evidence methods for estimating current burden methods for estimating future effects measures and policies for adaptation

Fig. 4.4. Qualitative types of uncertainty

S

Strengths

- Knowledge exchange;
- •Tackling existing health problems too;
- •Broadens the scope of public health;
- International contribution;

0

Opportunities

- New alliances;
- multi-sectoral collaboration;
- Upgrades current curricula;
- Building institutional capacities;

W

Weaknesses

Data quality and scale;
Few standardized methodologies
for analysis available of observed
effects;
Scenarios and narratives;

Uncertainties;

Priority setting; CO2 intensive;

T

Threat

Lack of political interest;

Non health agencies development of earlier assessments;

Media attention;

Decisions under uncertainty

Requests from MS

- Which data do we need?
- What resolution, frequency?
- Give us the analysis protocol?
- How can we get data from meteo free of charge?
- How good are they- a mass years are missing....
- How do we work with scenarios ...
- How can we estimate costs?
- How can we make decisions under uncertainty...

PHASE 2: Developing national adaptation strategies

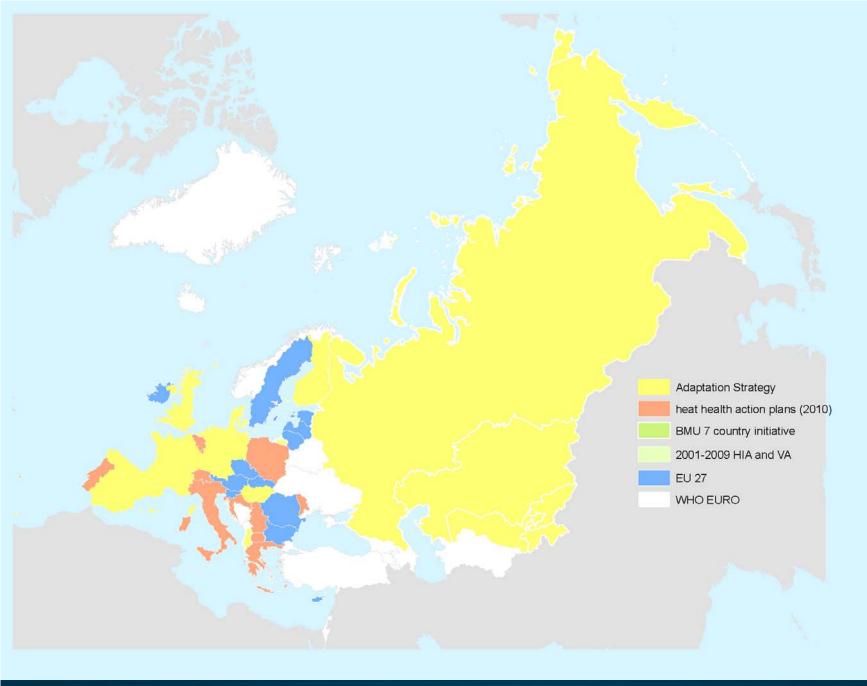

Elaboration of key issues

- Driven by scientific evidence
- Solution oriented
- Anticipatory
- Driven by best practice
- Leading by example
- Replicable and building in evolution over time

Strengthen health systems to protect health from climate change

Build institutional capacity

Extreme weather events
 preparedness and
 response;
Infectious disease
 surveillance and control;
Respiratory diseases early
 detection and early
 warning;
Air quality measurement;
Water management plans
 and small scale.

Food and nutrition action plan

promote renewable

energy for health

Energy efficiency and

services

Adaptation strategies

to assess the health impacts and vulnerability and to develop national or sub-national health adaptation plans

Intelligence and Outreach

Steering committees

Stakeholder involvement

Enhancing a national dialogue

Enhancing a regional – national dialogue

Building media capacity

Training young journalists to improve coverage

Increasing Children and youth awareness

National adaptation strategies

- 7 government nominated multi-sectoral steering committees;
- 210 senior officials trained;
- 30 specific working groups established;
- International advisory board;
- A public health framework;
- Technical assistance

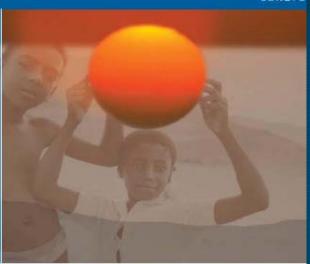

Problem definition

Health and Global Environmental Change SERIES No. 1

Methods of assessing human health vulnerability and public health adaptation to climate change

- What is the current burden of climate-sensitive health outcomes?
- How is the burden of climatesensitive health outcomes likely to change over the coming decades?
- Who is most vulnerable?
- What is the size of impact if no action taken?
- How effective are current activities?
- What needs to be strengthened or newly developed?

Prioritizing action

- Size of population at risk of harm
- Likelihood of the harm
- Timescale of risk: short/medium/longterm (S/M/L)

- Identification of interventions:
 - Legal, behavioural, institutional, informational....

Prioritizing action

Governance:

- Are existing institutional mechanisms in place?
- If yes: What is the current coverage?
- What can be newly developed within existing structures or strengthened?
- Which new mechanisms need to be put in place?
- Short-long term feasibility?

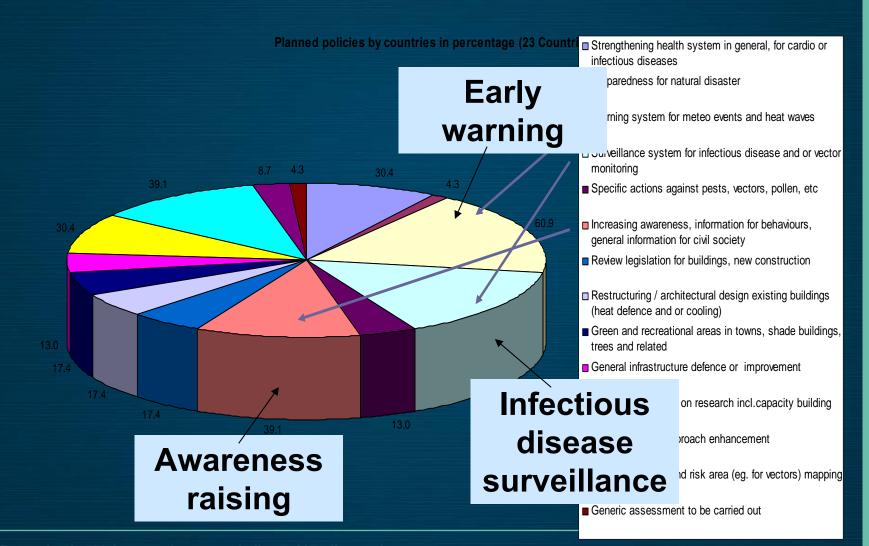

Criteria for prioritizing action

- Feasibility
- Barriers
- Costbenefits/effectiveness
- Opportunities
- Size of population that benefits
- Environmental, social and economic benefits
- Potential harm

Measures proposed in NAS and NCs (22 countries)

Strengthen health systems and services

Functions the health system performs

I N P U Stewardship

Creating resources (investment and training)

Service delivery (personal and population-based)

Financing (collecting, pooling and purchasing) Goals/outcomes of the system

Responsiveness (to people's non-medical expectations)

Health

Financial protection (and fair distribution of burden of funding)

Template for the content of a health adaptation plan

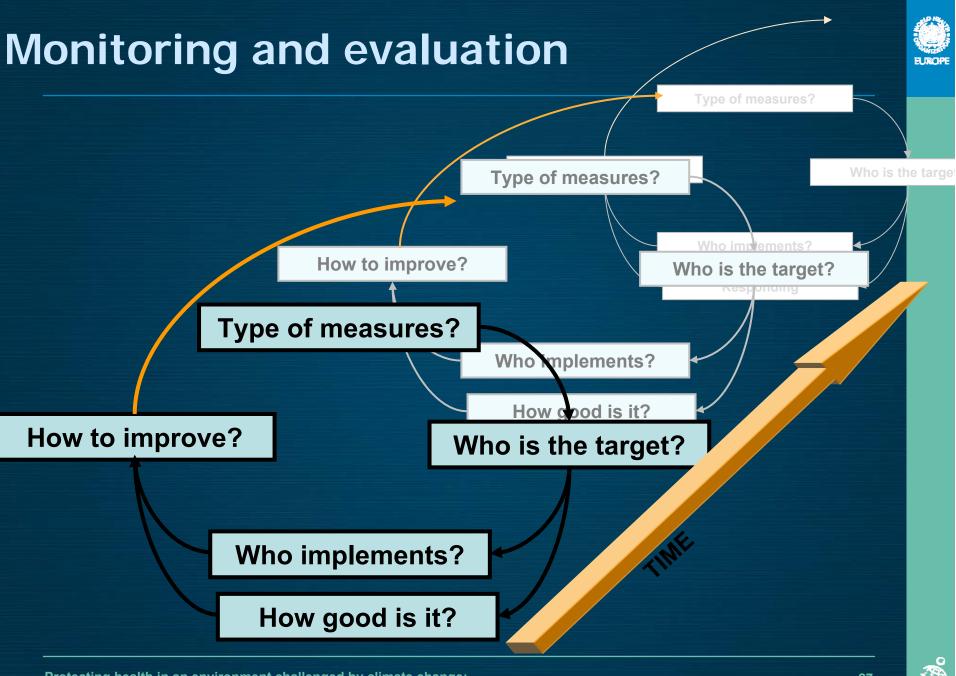

- Priority actions
- Delivery process
- Timetable
- Roles and responsibilities
- Communication Plan
- Performance management processes
- Monitoring and evaluation

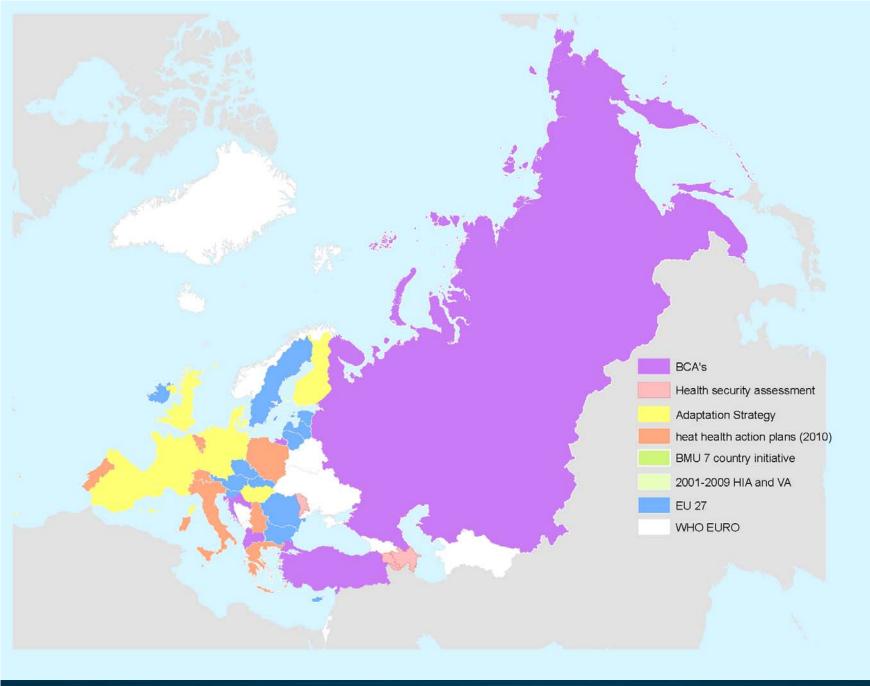

Outcome evaluation

A balanced & comprehensive picture of all the EURO Region using inter- & national data

Population exposures	Health effects	Policy actions
Outdoor air Ozone		
	 Respiratory mortality (monthly) 	
 Selected allergen flowering 		
Selected pollen episodes		
Ragweed		
	 Respiratory morbidity (proxy) 	
• Floods		
	 Excess heat-wave related mortality 	
		 Heat-health action plans
	Lyme borreliosis incidence	
	 Salmonellosis (changes with T°) 	
\$ 5 0	Cryptosporidiosis (per rainfall)	
≳		Prevent infectious diseases
=======================================		Secure water safety

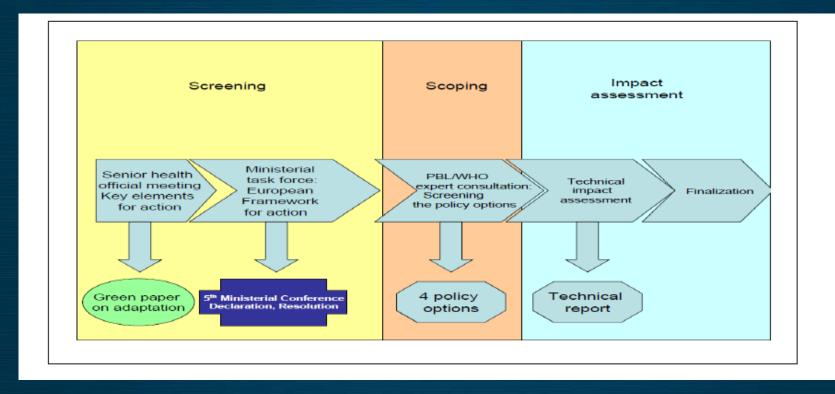

PHASE 3: Example: Impact assessment of policies to protect health from climate change in the European Union

The process

Four policy options

- Strengthen intelligence
- Mainstream health in mitigation and adaptation policies
- Strengthen health systems
- Health awareness

Example of results: health intelligence

Table 6. Major costs of health intelligence

Increased costs of health intelligence	Level of involvement	Approx. commitment country)	budget (per
Increase institutional capacity to compile and exchange information	Long-term capacity	See 2 to 4 below	
and conduct research (e.g. PEER study)	development (see 2-4 below)		
National health impact, vulnerability and adaptation assessments	Periodic consultancy	<€100,000 each	
3. Conduct research to			
a. Improve risk assessment	Long-term multi-disciplinary	€1-5 million/year	
b. Identify effective and cost-effective interventions	research programmes	€1-5 million/year	
 c. Understand co-benefits for health of mitigation & adaptation interventions in other sectors 		€1-5 million/year	
d. Explore alternatives for infectious disease surveillance	Periodic planning exercise	<€100,000 each	
e. Explore alternatives for extreme events health action planning (and other decision-support tools)	Mid-term consultancy	€500,000 each	
f. Assess damage and adaptation costs	Periodic consultancy	€100,000 each	
Integrate or establish an integrated information platform for data, indicators, trends and best practices/policies	Permanent Clearing House	€2 million/year1	
Implementation costs of health protection measures	See sections 5, 6 and 7		

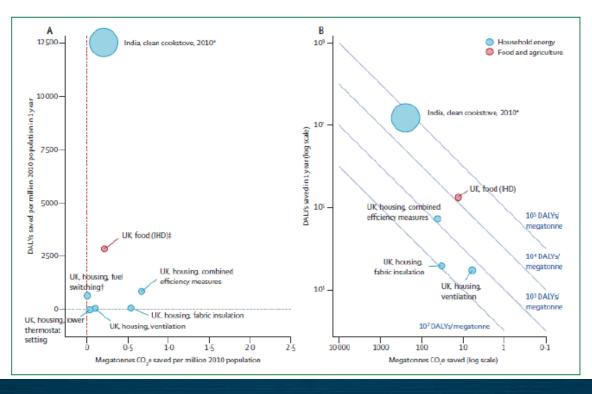

¹ Utilises capacity of networked institutions. Budget reflects additional coordination and planning costs.

Example: health benefits in mainstreaming health

Figure 7. Attributable reduction in disease burden and in carbon dioxide equivalent emissions for household energy and food and agriculture case studies (A) Disability-adjusted life-years (DALYS) saved and carbon dioxide equivalent (CO_2e) reduction per million of the 2010 population. (B) Reduction in total of DALYs and CO_2e for each country.

Example: environment benefits of greening health services

An overall reduction of 1% of total EU GHG emissions

Table 17 Estimated savings in the short to medium term in European health service GHG emissions

					Low e	stimate	High estimate	
		CO ₂ Emissions			Effect'e		Effect'ne	
				Control	ss	Saving	SS	Saving
Sector	Sub sector	MtCO _{2e}	% of total			MtCO₂e		MtCO ₂
				group				е
