

Questions for facilitated discussions

IA tools and indirect land use changes from biofuels

- what is the role of impact assessment (strategic and project level) in delivering the kinds of land use planning needed for mitigating iLUC risks?
- what are the opportunities and barriers to land use planning and management practices enable iLUC mitigation?

IA tools and landuse planning to support ecosystems that are resilience to the effects of climate change

- In the light of inherent uncertainty about the long-term consequences of climate change, what adaptive management measures are to be promoted on the short term to enhance the resilience of ecosystems and to maintain valued ecosystem services?
- How should these opportunities for climate change adaptation provided by ecosystems be incorporated (“and prioritised”) in SEA and land use planning?
