

Enhancing Cumulative Effects Management in Canada

A GIS-based tool for federal project identification

Joseph Ronzio

John Nick Sanders

Presentation to IAIA Special Topics Conference on Cumulative Effects

November 6-9, 2008

Need for a Federal Tool

- All projects have a contribution to cumulative effects
- Annually 5000–6000 projects undergo federal EA
- EAs conducted in a widely distributed manner
- No tool connects information on projects for CEA
- EA Registry an underutilized information source

Canadian EA Registry

- Public registry for all federally reviewed projects
- Available Registry data is underutilized
 - >30,000 projects registered
 - 60+ pieces of information for each assessment
 - Georeferenced by city, latitude/longitude
- Registry currently has limited mapping capability, no analysis tools
- Purpose of Registry information is for public awareness, not analysis

Development of the Tool

- Literature review on characteristics and challenges to CEA
- Registry data entered into a GIS
- Projects mapped and analyzed on basic key criteria
- Cumulative effects addressed at project, VEC, and regional levels

Project-Level Focus

Project-Level Application: Total Mitigation Components Identified by Project within 10km of Sample Project

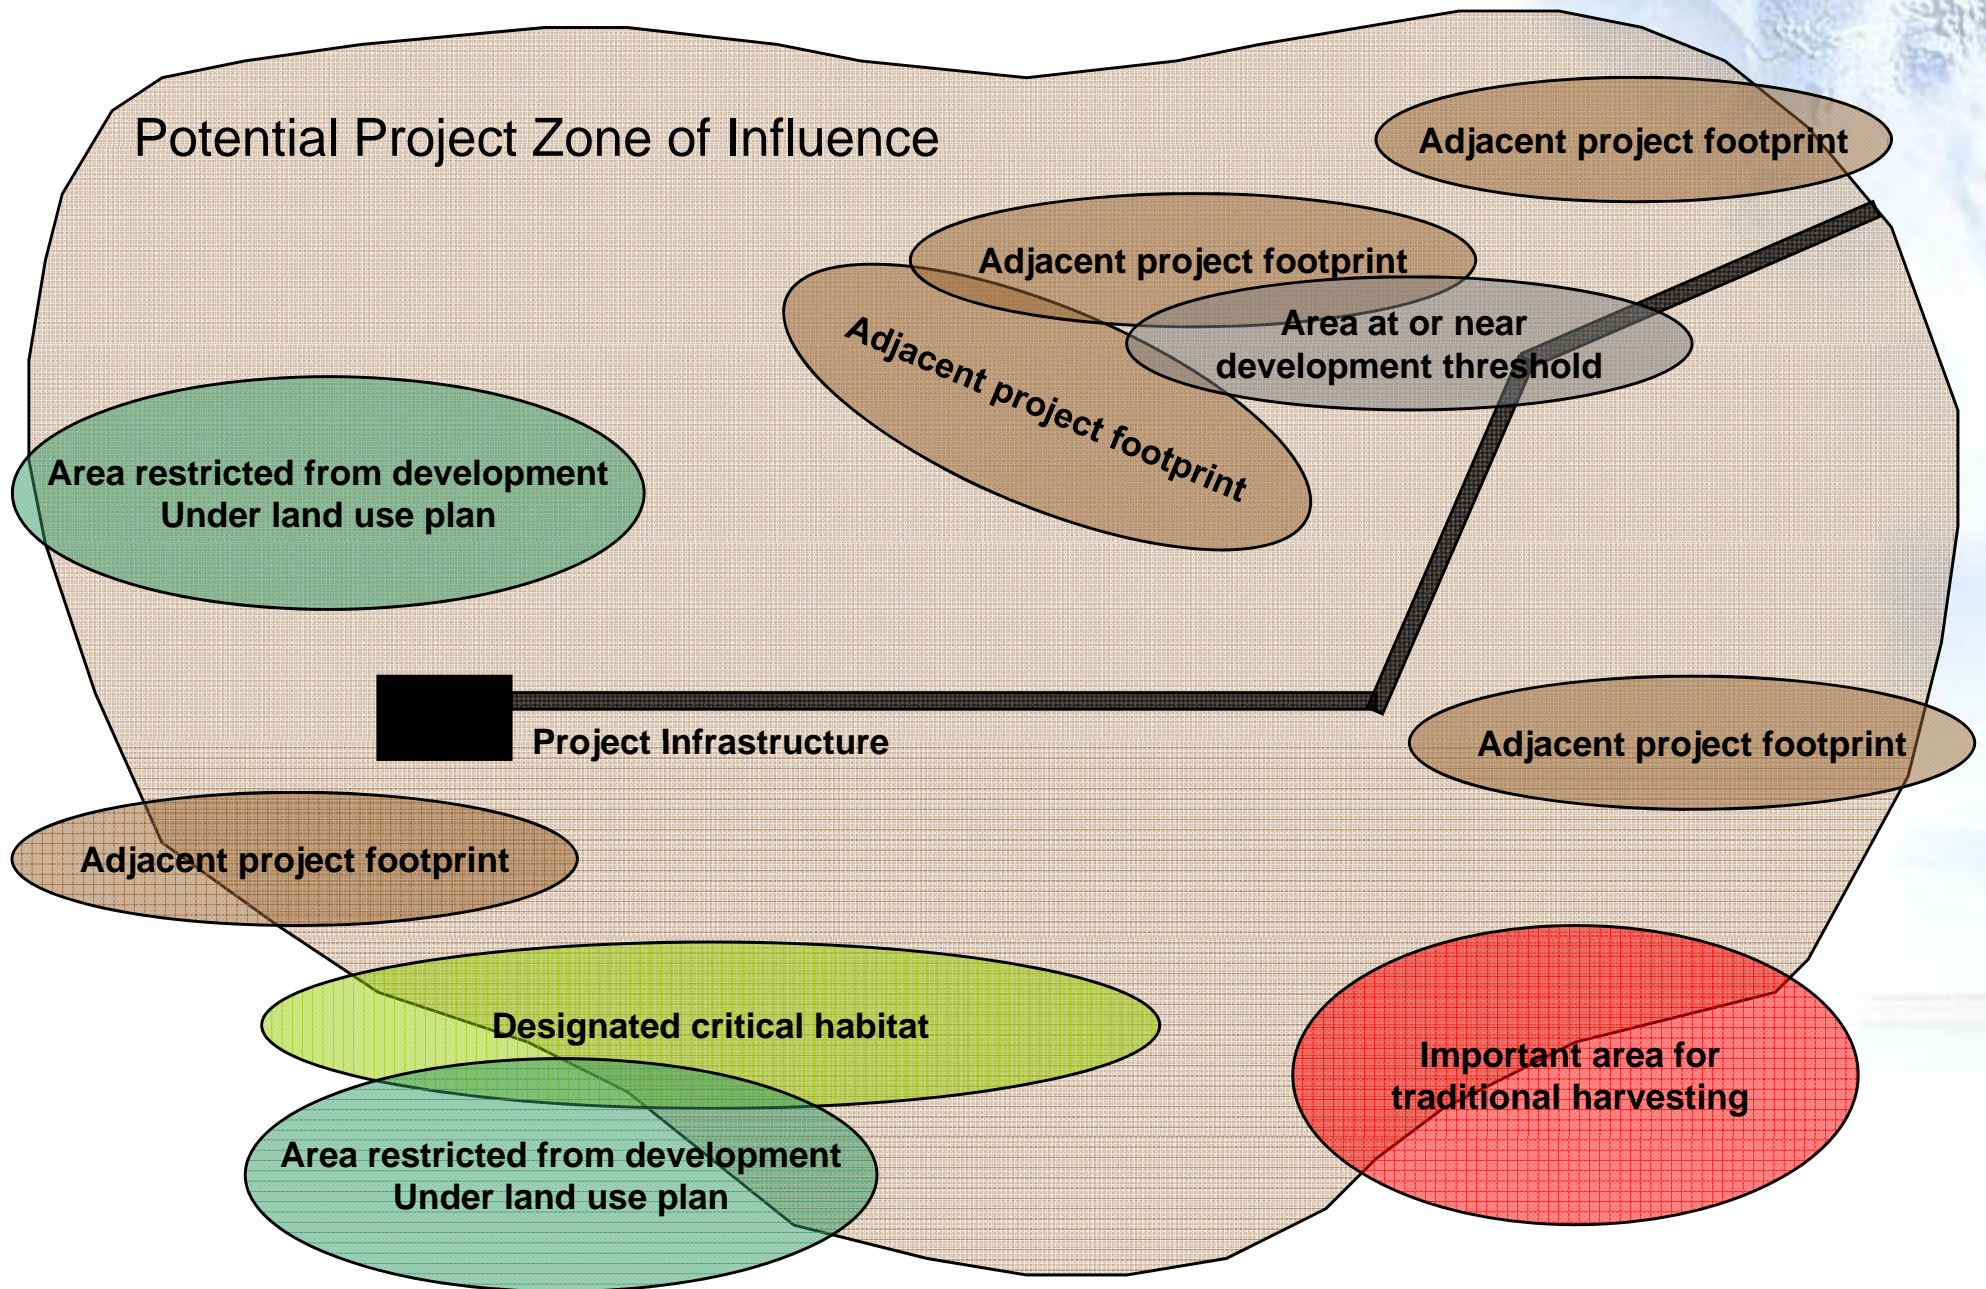

Created by Joseph Ronzio - November 2007
 Source: Canadian Environmental Assessment Registry, Department of Transportation - www.grib.ca/0113/index-e.asp
 Department of Environment and Local Government - www.grib.ca/0009/index-e.asp

Project-Level Application: Project types for projects located within 10km of Sample Project

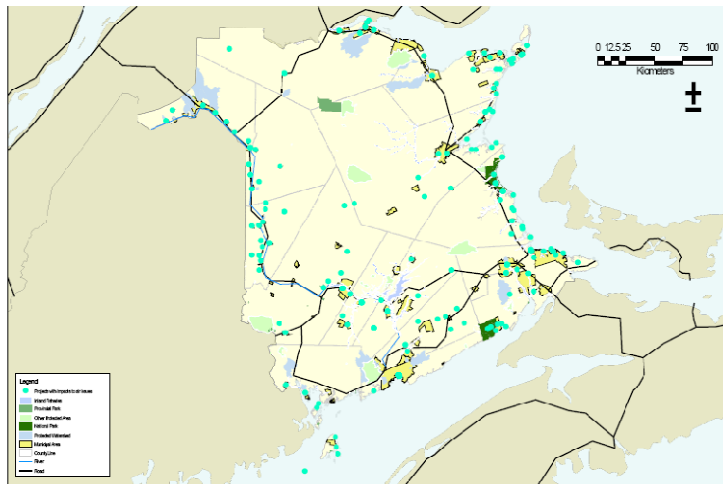

Created by Joseph Ronzio - November 2007
 Source: Canadian Environmental Assessment Registry, Department of Transportation - www.grib.ca/0113/index-e.asp
 Department of Environment and Local Government - www.grib.ca/0009/index-e.asp

Idealized Spatialization of Information Resources

Regional Focus

New Brunswick projects with impacts to air 2004-2006

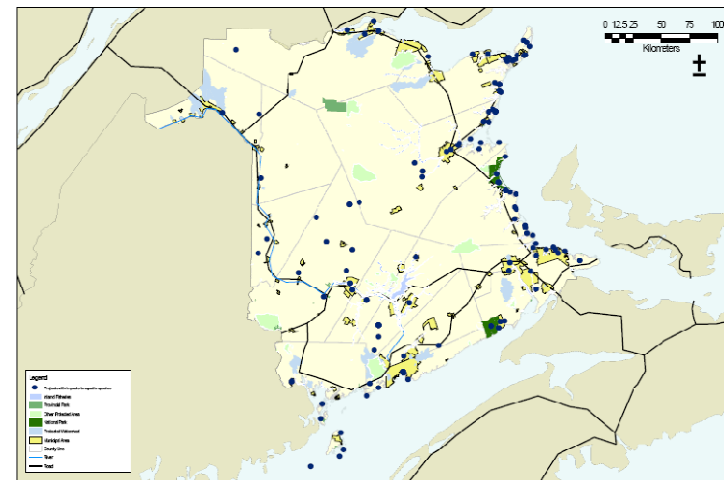

Created by Joseph Ronzo - November 2007

New Brunswick projects with impacts to terrestrial issues 2004-2006

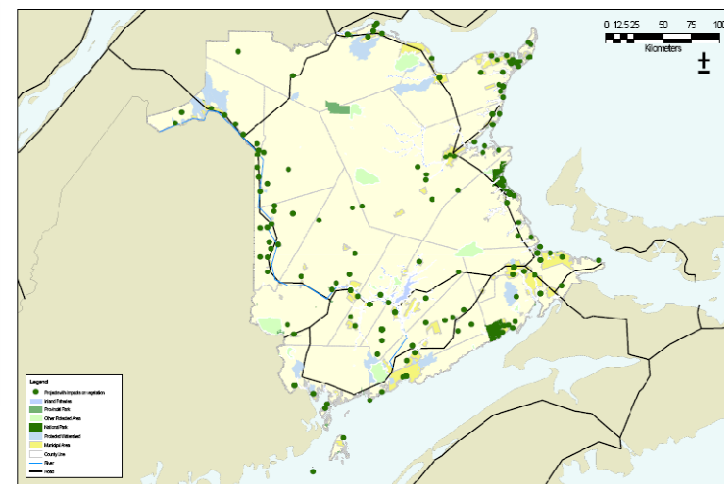

Created by Joseph Ronzo - November 2007
Source: Canadian Environmental Assessment Registry, Department of Transportation - www.cerib.ca/0113/index-e.asp
Department of Environment and Local Government - www.gnb.ca/0009/index-e.asp

New Brunswick projects with impacts to aquatic species 2004-2006

Created by Joseph Ronzo - November 2007

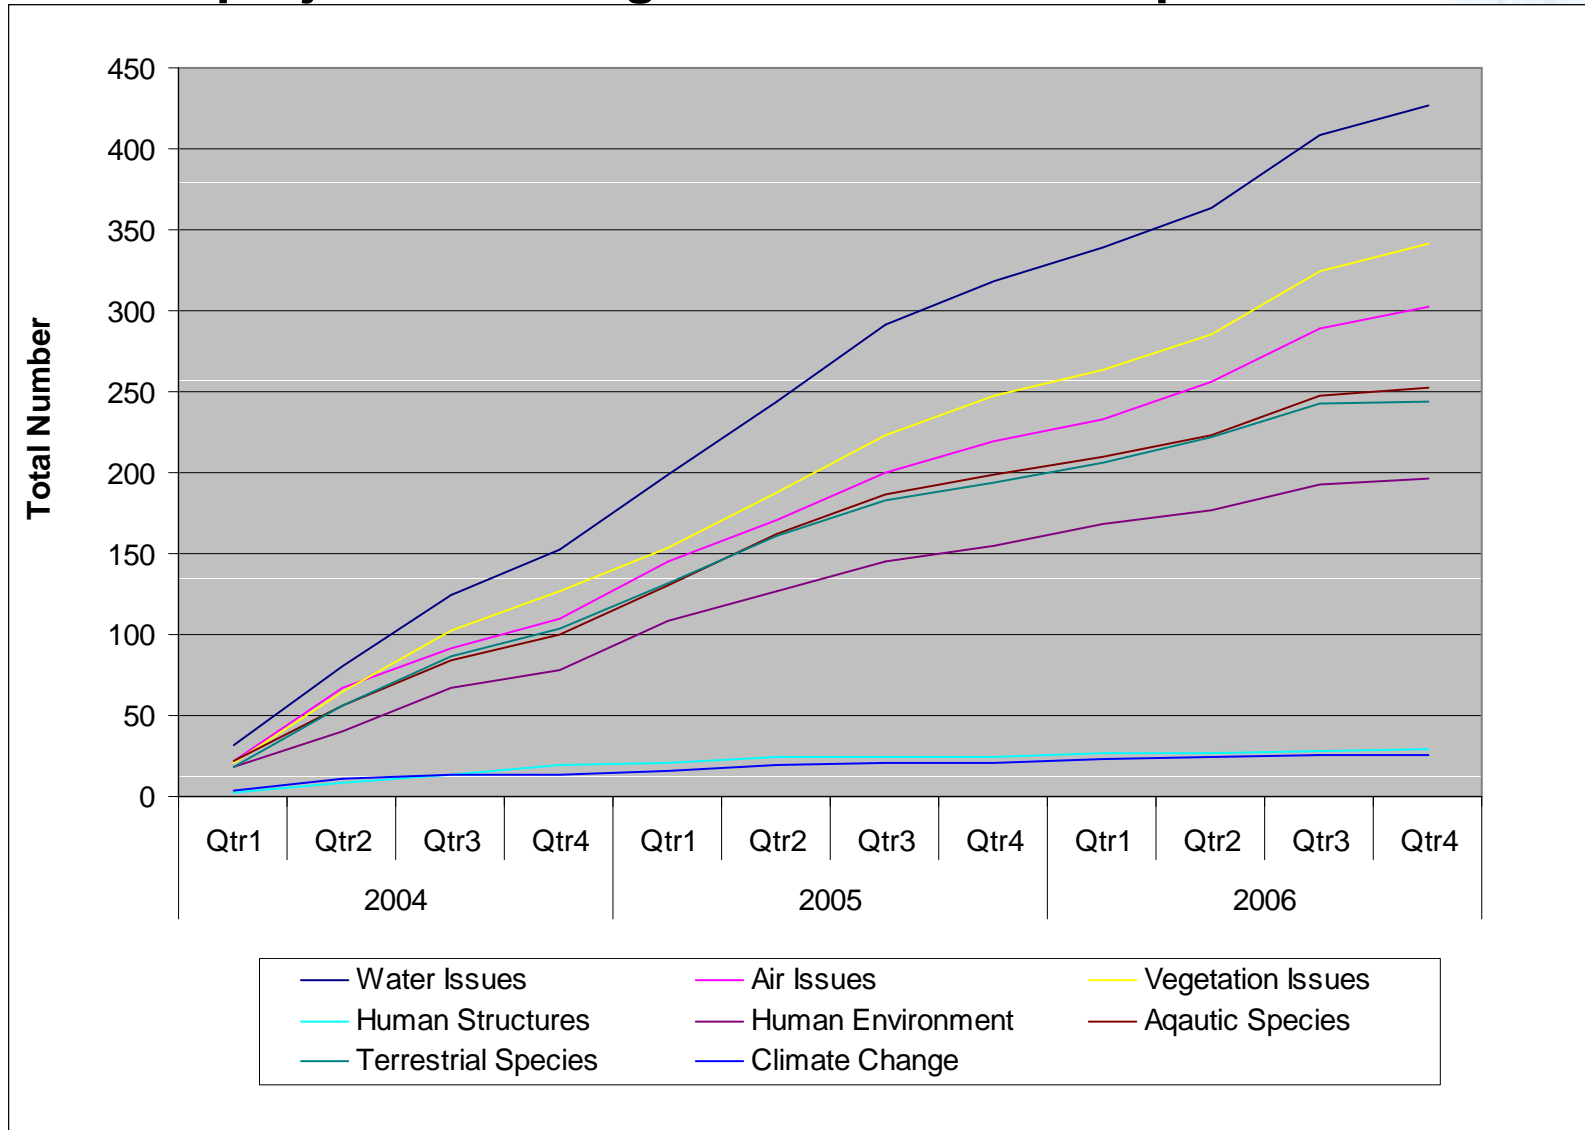

New Brunswick projects with impacts to vegetation issues 2004-2006

Created by Joseph Ronzo - November 2007
Source: Canadian Environmental Assessment Registry, Department of Transportation - www.cerib.ca/0113/index-e.asp
Department of Environment and Local Government - www.gnb.ca/0009/index-e.asp

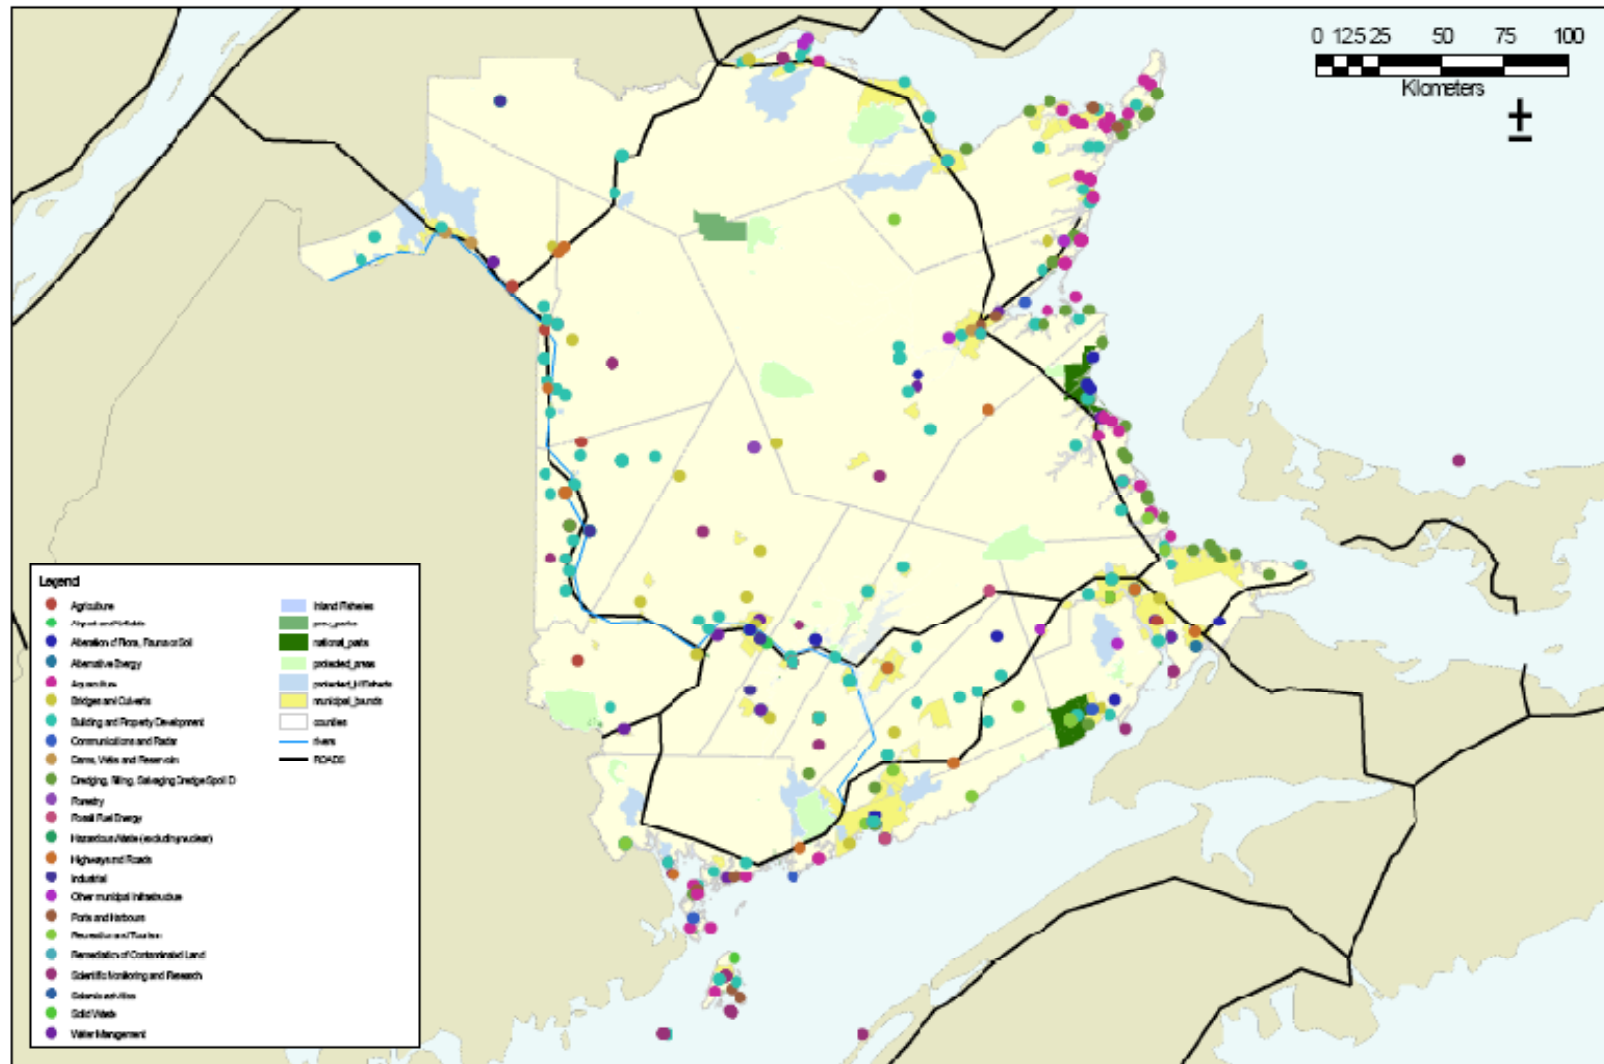

Regional Focus

Cumulative projects affecting environmental components 2004-2006

Sectoral Results

New Brunswick projects by CEARIS Project Descriptor 2004-2006

Created by Joseph Porzio - November 2007

Source: Canadian Environmental Assessment Registry, Department of Transportation - www.gnb.ca/0113/index-e.asp

Department of Environment and Local Government - www.gnb.ca/0009/index-e.asp

Implementation Considerations

- Ability to address some characteristics and challenges of CEA
- Some key issues not addressed on EA data alone
- Project data is used to scope assessments, consider interconnectedness
- Simplicity of tool can act to improve institutional capacity
- **Areas for improvement remain**

Recommendations

- Improve current georeferencing
- Capture specific project & impact information
- Include monitoring data for analysis
- Link to other systems, initiatives
- Web-enable Registry to allow access by practitioners, public, interested parties

Integrating other data resources

- Provincial EA resources
- Regional thresholds and restrictions
 - Land use plans
 - Conservation/range management plans
 - Lack of established thresholds a key gap
- Socio-cultural registers
- SARA recovery plans and critical habitat
- ‘Spatializing’ the information resources

Conclusions

- Registry data showed potential for analysis
- Most useful as tool for CE scoping
- Improvements to available data would improve tool for CEA
- Links can and should be made to other data resources and systems
